Milestone CyberXmas is back! 😊

The Security and Compliance team is pleased to announce that the CyberXmas annual CTF is back! Please go to the https://cyberxmas.milestone.dk and register your team.

The first two challenges will be released to you on Monday, 2.12, so stay tuned! In the meantime, please familiarize yourself with https://cyberxmas.milestone.dk/rules.

NOTE: As some of the cybersecurity related tools might trigger security alerts, please be very careful not to execute unknown/untrusted payloads on your Milestone machine. We strongly recommend using a dedicated virtual machine that is not part of Milestone domain. If you can, host one on your favorite cloud provider, **away** from the company resources 😊 . Alternatively, use your devbox and the magic of Hyper-V or WSL. If you need assistance, please reach to one of us and we will try to help. Let's all respect the hard work our IT department puts into securing our corporate network and let's try not to divert their attention with false alarms 😊

Good luck!

And H4ppy H4ck1ng!
